

Create a bug-free garden

Getting rid of all the nasties in your garden early, will let you enjoy your garden this spring and give you time to focus on the fun side of gardening!

1. **Control weeds with Roundup weedkiller.** Available in ready to use or concentrate packs, Roundup kills weeds totally and leaves no residues in the soil so you can re-plant as soon as weeds have died.
2. **For longer term (up to one year) weed control on paths, driveways, paved areas and tennis courts use DAS Long Term Weedkiller.** It kills existing weeds and stops weeds from growing for up to twelve months, **DAS Long Term Weedkiller** must be used with care. Remember – nothing will grow in the treated area for up to twelve months!
3. **Spray with low toxic, systemic Confidor** to protect plants from a wide range of insect pests (such as aphids and mealybugs). Once **Confidor's** working inside the plant, it only affects insects that actually attack the plant and, because it's so long lasting it won't have to be sprayed as often as older style insecticides.
4. **Get rid of snails and slugs with Yates Blitzem** pellets. It attracts and kills snails and slugs. Use sparingly – it only takes a few pellets to do the job! Remember, cooler nights bring out the snails and slugs that can demolish young plants overnight.

Shopping Check List

- Roundup WeedKiller
- Yates DAS Weedkiller
- Confidor
- Blitzem Pellets
